RxLabelReader

MeditoryTM's RxLabelReader and Label Information Management System revolutionizes prescription, OTC and vitamin medication management.

- Rapidly captures and applies critical patient information
- Reduces data errors
- Secures accurate, retrievable images of the prescription label
- Integrates state-of-the-art SaaS and cloud technologies
- Leverages patented device and software technology
- Facilitates HIPAA, insurer and agency audit compliance
- Reduces legal risks

To reduce medication error rates; physical patient prescription container reviews are required by health care providers, insurers, agencies and during Home Health Care visits by care givers.

Meditory's RxLabelReader converts prescription labels to OCR text via patented rotational macro-image processing and unique Intelligent Character Recognition (ICR) technology. Rx Label Text can be generated on the laptop or more expediently on the Meditory cloud software that can be licensed from Meditory to run on other cloud hosting systems.

RxLabelReader generates the flat image of prescription labels in seconds and sends it via HIPAA approved 256 bit encryption to the cloud for image and text processing.

Prescription inventory is the most dreaded part of the patient intake process. Eliminate lost time, inaccurate data and frustration with the RXLabelReader™
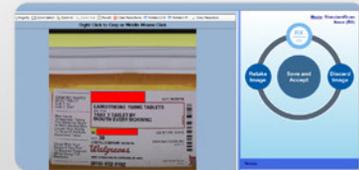

Scan	Process	Retrieve

"Listing medications by hand constitutes a grave risk. Mistakes can have dire consequences for the patient and consequently for the agency owners. Liability insurance constitutes the largest single expenditure after salaries and is our biggest source of anxiety. The slightest incident at best causes premiums to catapult up.   One can contest handwriting, but there is no contesting a scanned label."
-Home Care Company Executive

"I like the scanner for the actual labels it scans and preserves. It is fast and easy to use. It lets me focus more time on my care giving rather than administrative paperwork."
-Nurse Practitioner

Imagine; no more missing prescription information on PMP forms.
Confusing drug names, transcription errors, messy and expensive multipart forms. These are everyday issues. If the paper forms are missing information such as dosage or use instructions, labor intensive phone calls to the patient's family, doctors or pharmacies are required. Some patients may not be able to provide this information due to poor eyesight, dementia or other physical issues.

Patients typically have multiple doctors and multiple pharmacies.
Tracking down missing information can be costly to avoid regulatory citations, fines and frequent repeat inspections besides legal liabilities and increased insurance premiums to care givers!

Transform your information management with the easy and affordable

RxLabelReader

- Quickly capture and apply critical patient information
- Reduce data error and liability
- Secure accurate, retrievable images of the prescription label

Designed for healthcare professionals at home healthcare, assisted living, nursing home, hospital, physician office and pharmacy locations

- Integrate state of the art SaaS and cloud technologies
- Leverage patent-pending device and software technology
- Facilitate HIPAA compliance

The RXLabelReader Solution:

- Eradicates manual transcribing errors
- Cuts costs of nurse, shifts labor to back-office support
- Saves time during the critical intake process
- Improves care allowing caregivers to focus on patients
- Supports compliance saving fines, eliminates citations and accelerates audit response
- Fast, complete scanning of all medications including OTC drugs, vitamins and expired prescriptions that are often not recorded due to time constraints

In seconds, multiple images are merged to form a flat label image and can be uploaded to the cloud.

Many patients have a dozen or more medications.

Images are processed for vital information and available within minutes.

Prescription label management on the cloud:

- **Secure 24/7 label information verification via** our cloud supported offering eliminates costly, time-consuming calls to patients, doctors or pharmacies to clear up data errors and missing information.

- **Compliance support reduces Caregiver's liability** - Permanent and complete electronic record of medications in the Cloud. No more aging, illegible or misplaced paper files. *Eliminates need to hold bottle with one hand and "peck" entry with the other onto tablets or laptops.*

- **Improved medication management** - Timely, complete and accurate information provides physicians better drug interaction control. Doctors review the actual ingredients of all medicines directly from the label images.
